

Heliex Funding Options

Unlock the potential for generating revenue and energy from waste heat with Zebec

Funding Options

Zebec customers can benefit from a range of flexible financing options.

These options, highlighted below, allow you to choose whether or not to invest in a project in full or leave the investment risk with us.

Zebec's finance options:

- ✧ Capped energy purchase (electricity only)
- ✧ Capital Purchase
- ✧ Fully Financed option

Through a combination of flexible and competitive finance options, alongside innovative technology developed by our in-house team of specialist consultants and engineers, we can provide a cost effective and fully integrated solution.

Capped energy purchase

As capital funds are not always available, we can offer Heliex technologies on a capped rate energy purchase scheme.

This means that we fund all the costs associated with the implementation of the project, including:

- ✧ design
- ✧ project management
- ✧ supply
- ✧ installation
- ✧ commissioning

As a customer, you commit to the purchase of electricity generated by our Heliex engine over a period of years. A valued element to this position is the maintenance service provided by our nationwide service team, offering continual support throughout the contract term.

Contracts tend to vary in length, from 5 to 15 years, although they can be tailored to suit both the specific requirements of the customer and the site.

Capital purchase

The scheme can be either the sole purchase of the unit or the full scope of the energy project including:

- ✧ supply
- ✧ installation
- ✧ commissioning

The fixed cost can be for a complete turnkey package or just the supply of equipment. A separate operation and maintenance package is offered in parallel for the lifetime of the system.

Fully Financed

As with all Zebec technologies, you can choose whether you wish to invest in the project or leave all the investment risk with us.

We are able to facilitate project specific funding and we are happy to discuss this option on an individual basis.

Our fully financed solution means that the generators we supply remain in our ownership. This ensures that maximum flexibility on the project is retained and also means that decisions can be made quickly if and/or when further investment is required.

Zebec offers a comprehensive range of services throughout a projects lifecycle.

Stage One

Opportunity Assessment

Stage Two

Site Survey and Proposal

Stage Three

Installation and Commissioning

Stage Four

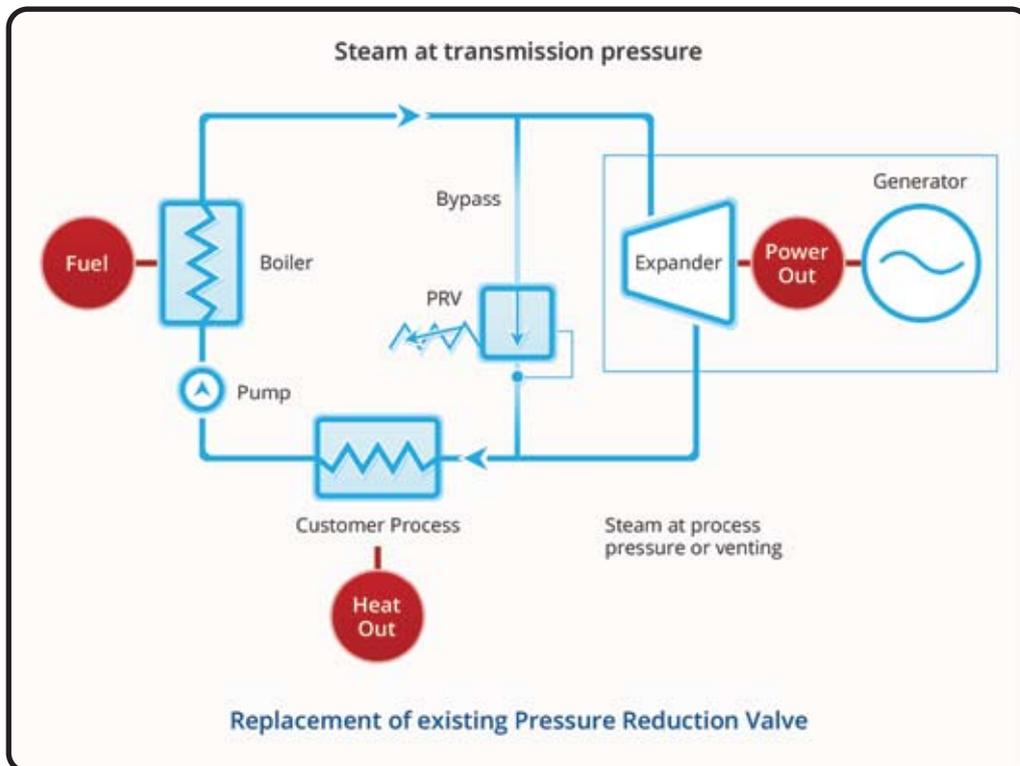

Supervision and Maintenance

Zebec provide technical expertise and project delivery for the integration of Heliex products.

Features of Heliex Technology

-  Simple and reliable
-  Versatile
-  Rapid deployment
-  Accepts fluctuating mass flow rates
